Tristel shows latest infection control products at British Society of Echocardiography meeting

10 August 2009; Newmarket, UK: Infection control specialist Tristel Solutions will exhibit the new Stella5 instrument decontamination system, and the company's 'Tristel for Ultrasound' product range, to cardiac sonographers and doctors attending the British Society of Echocardiography (BSE) 2009 Annual Meeting in Liverpool on the 2nd and 3rd October.

Stella5 is a low cost system suitable for the sporidical disinfection of ultrasound probes. In combination with Tristel's unique chlorine dioxide chemistry, Stella5 delivers sporidical, high-level disinfection in just 5 minutes. Battery operated, portable and requiring no water supply, Stella5 operates with single-use disinfectant and records a comprehensive audit trail, providing best practice protocols for partially immersible instruments.

The 'Tristel for Ultrasound' product range covers the complete infection control needs of ultrasound departments and includes: Duo for Ultrasound and Solo for Ultrasound for the disinfection of equipment such as skin surface transducers, intra-cavity probes, probe holders, keyboards, monitor cases, control panels, cables and all ultrasound accessories; Tristel Trio wipes for controlled manual sporidical disinfection of transoesophageal echo probes (TOE probes); and Fuse for Ultrasound, an easy to use 'burstable sachet' for floors, walls and general hard surfaces.

The British Society of Echocardiography (BSE) 2009 Annual Meeting (BSE 2009) aims to bridge the gap between new technologies and how to use them. Tristel's Stella5 disinfection system and 'Tristel for Ultrasound' range deliver straightforward technology and unique chemistry for the comprehensive elimination of bacteria, viruses and spores in ultrasound departments. Applications address all four routes of transmission of infection and contamination – surfaces, instruments, water and people. All Tristel's products are very simple to use and experts will be available at the exhibition to answer any questions.

About Tristel

Tristel uses proprietary chlorine dioxide chemistry to create instrument and surface disinfectants. With its origins as a healthcare business specialising in infection control products, Tristel has recently extended its operations to include legionella control in water supplies and contamination control in the food and pharmaceutical industries.

The company is creating applications for its chemistry that address the four routes of transmission of infection and contamination – surfaces, instruments, water and people.

Tristel plc has its headquarters in Newmarket, UK and a network of distributors around the world. The company was admitted to trading on AIM on 1 June 2005. Its stock exchange symbol is TSTL.
