**Stand No: 75**

**Tristel shows new, specialist products for infection control**

This year has seen considerable expansion in the range of infection control products from Tristel Solutions, many of which will be on display at the ICNA national conference in Brighton, UK from 24-26 September 2007.

Based on proprietary chlorine dioxide technology, Tristel's range now includes products designed and packaged to meet the specific needs of different fields of infection control. The portfolio encompasses Tristel for ENT, Tristel for Ultrasound, Tristel for Endoscopy, Tristel for Laboratories, and Tristel for Surfaces.

Tristel for ENT comprises the TRIO Wipes system designed for use with flexible, non-lumened nasendoscopes. For ultrasound, a combination of wipes, foams and solutions can be configured to suit each specific decontamination task. A comprehensive range of solutions and accessories addresses endoscopy reprocessing requirements, while solutions, foams and wipes provide effective decontamination in laboratories. Conveniently packaged foams and easily activated solutions are the mainstay of Tristel for Surfaces. [www.tristel.com](http://www.tristel.com)

### About Tristel

Tristel uses proprietary chlorine dioxide chemistry to create instrument and surface disinfectants. With its origins as a healthcare business specialising in infection control products, Tristel has recently extended its operations to include legionella control in water supplies and contamination control in the food and pharmaceutical industries.

The company is creating applications for its chemistry that address the four routes of transmission of infection and contamination – surfaces, instruments, water and people.

Tristel plc has its headquarters in Newmarket, UK and a network of distributors around the world. The company was admitted to trading on AIM on 1 June 2005. Its stock exchange symbol is TSTL.
