

NEWS RELEASE

New Tristel Jet – chlorine dioxide efficacy for the cost of an alcohol wipe

13 January 2009: Newmarket, UK: Tristel Jet is the exciting new addition to Tristel's extensive range of infection control products based on the company's proprietary chlorine dioxide technology. Complementing the established FUSE for Surfaces cleaning and disinfection products, which are widely used in hospitals around the world, Tristel Jet adds a non-aerosol, gel-based formulation to the range, at a price equivalent to using standard alcohol wipes. However, unlike alcohol wipes, Tristel Jet is sporicidal and highly effective against a wide range of organisms including MRSA and *Clostridium difficile*.

Tristel Jet is supplied as a non-aerosol trigger spray that permits accurate directional application and eliminates any health and safety concerns that may be associated with aerosols. Its thickened formulation allows it to cling effectively to hard surfaces, for wiping or mopping as appropriate.

Simply apply the gel to a wipe or directly to a surface. Wipe the surface, ensuring complete coverage and leave to dry for 30 seconds. The trigger head is re-usable and comes as part of the starter pack on initial purchase.

About Tristel

Tristel uses proprietary chlorine dioxide chemistry to create instrument and surface disinfectants. With its origins as a healthcare business specialising in infection control products, Tristel has recently extended its operations to include legionella control in water supplies and contamination control in the food and pharmaceutical industries.

The company is creating applications for its chemistry that address the four routes of transmission of infection and contamination – surfaces, instruments, water and people.

Tristel plc has its headquarters in Newmarket, UK and a network of distributors around the world. The company was admitted to trading on AIM on 1 June 2005. Its stock exchange symbol is TSTL.
