

NEWS RELEASE

Tristel Fusion for Surfaces - simplifying high-level disinfection

14 December 2007: Cambridgeshire, UK: Packaged in convenient, easy to use, burstable sachets, ***Tristel Fusion for Surfaces*** delivers high-level disinfection of floors, walls and general hard surfaces in hospitals. No counting, weighing or calculations are needed to make up a working solution at the right concentration – and no waiting for chlorine tablets to dissolve.

Using Tristel's chlorine dioxide technology – providing a high-level sporicidal disinfectant that is effective against a wide range of organisms including *Clostridium difficile* - Fusion is ready to use with just a single dilution. One sachet poured into 5 litres of water produces a sporicidal solution requiring a contact time of only 5 minutes. The inclusion of a powerful surfactant ensures a thorough cleaning effect. Unlike chlorine releasing agents, there is little odour and no health and safety or disposal issues: all features that have received positive comments in trials.

Fusion for Surfaces eliminates any need to prepare disinfectants of various strengths, or wait for chlorine tablets to dissolve, simplifying disinfection and cleaning processes, and minimising the risk of human error.

About Tristel

Tristel uses proprietary chlorine dioxide chemistry to create instrument and surface disinfectants. With its origins as a healthcare business specialising in infection control products, Tristel has recently extended its operations to include legionella control in water supplies and contamination control in the food and pharmaceutical industries.

The company is creating applications for its chemistry that address the four routes of transmission of infection and contamination – surfaces, instruments, water and people.

Tristel plc has its headquarters in Newmarket, UK and a network of distributors around the world. The company was admitted to trading on AIM on 1 June 2005. Its stock exchange symbol is TSTL.
