

NEWS RELEASE

Tristel – tailored for infection control

16 September 2008: Newmarket, UK: Infection control company Tristel will exhibit from its extensive range of high level disinfection products at the Association for Perioperative Practice's 44th Annual Congress which takes place from 6-9 October 08 in Harrogate (UK).

Based on proprietary chlorine dioxide technology, Tristel's products are delivered in a variety of convenient formats designed to suit the specific requirements of the job at hand. Specially tailored packages and products meet the individual decontamination needs that arise in endoscopy; ear, nose and throat; ultrasound; reproductive health and dentistry. Others help tackle the challenges of disinfecting hospital and laboratory surface.

For example, Tristel is now the most widely used high-level disinfectant / sterilant for flexible endoscopes in the UK. The company also offers revolutionary decontamination systems for endoscopy with the Tristel Shine benchtop washer disinfectant, the portable Stella 5 unit and the Tristel Generator for continuous delivery of chlorine dioxide solution.

Tristel sporicidal wipes systems are well-established and used extensively for the decontamination of non-lumened medical equipment such as nasendoscopes, ultrasound transducers and cardiology equipment. A newly published study has provided further confirmation of their mycobactericidal activity.

Tristel FUSE for Surfaces is active against a wide range of organisms and delivers high-level disinfection of floors, walls and other hard surfaces in hospitals. Effective in combating *Clostridium difficile*, it is rapidly becoming a popular replacement for chlorine tablets as the disinfectant of choice.

For details of the full product range visit Stand C100 or go to Tristel's new website www.tristel.com

About Tristel

Tristel uses proprietary chlorine dioxide chemistry to create instrument and surface disinfectants. With its origins as a healthcare business specialising in infection control products, Tristel has recently extended its operations to include legionella control in water supplies and contamination control in the food and pharmaceutical industries.

The company is creating applications for its chemistry that address the four routes of transmission of infection and contamination – surfaces, instruments, water and people.

Tristel plc has its headquarters in Newmarket, UK and a network of distributors around the world. The company was admitted to trading on AIM on 1 June 2005. Its stock exchange symbol is TSTL.
