**NEWS RELEASE  
20 October 2006**

**Tristel exhibits new endoscope sterilising tray and Fusion 'burstable sachet' at Medica 2006**

Tristel, the specialist company that uses its proprietary chlorine dioxide chemistry to create instrument and surface sterilants for use in the healthcare industry, will exhibit new products at Medica 2006 (15-18 Nov; Düsseldorf, Germany).

Foremost among these is a novel endoscope sterilising tray designed for use with the company's recently introduced Fusion system; this 'burstable sachet' presentation of Tristel's chlorine dioxide high level disinfecting and sporicidal solution provides a highly convenient means of preparing fresh active solution for single use. The combination of tray and Tristel Fusion enables single-use decontamination of flexible endoscopes, with automatic draining of the disinfectant after a pre-programmed time.

Additionally the endoscope tray acts as a storage device, enabling safe transportation of decontaminated instruments around the hospital. It can also be integrated into a trolley system. Since drainage, a water supply and power are not required, this enables mobile decontamination of instruments.

The endoscope tray was developed in conjunction with Mark Fraundorfer, an eminent New Zealand urologist. The first version is for use with cystoscopes, bronchoscopes, nasendoscopes and ultrasound probes. Subsequent versions will accommodate larger, heat sensitive instruments.

The Tristel team will be available at Medica on Stand No. Hall 6/A37 to discuss individual infection control issues [www.tristel.com](http://www.tristel.com)

### **About Tristel Solutions Limited**

The cornerstone of the Tristel product range is a patented chlorine dioxide chemistry used to sterilise medical, dental and veterinary instruments. In 1998, the business that became Tristel acquired all worldwide rights to this chemistry. The principal operating subsidiary of the group was established at this time to exploit the UK market and Tristel has become the leading supplier of liquid chemical sterilising solutions to UK hospitals.

The recently introduced Tristel Wipe is the world's first rapid action sporicidal wipe. It incorporates Tristel's patented chlorine dioxide chemistry and can kill all organisms on a pre-cleaned surface, from which soil and organic matter have been removed, with a contact time of only 30 seconds. The Tristel Generator and Tristel Duo are the latest addition to the company's range of products and services.

Tristel Solutions Limited was admitted to trading on AIM on 1 June 2005. Its stock exchange symbol is TSTL.
