

NEWS RELEASE
27 March 2007

New offices for Tristel Technologies (formerly Vernagene) as water treatment range forges ahead

On 30 March 2007 Tristel Technologies, formerly Vernagene and now part of Tristel plc, will move into new offices on the Tonge Bridge Industrial Estate in Bolton, UK. Access to improved facilities at the new offices will enable the company's highly experienced sales and service teams to meet a growing demand for its chlorine dioxide-based products and services for water treatment and hygiene management.

Tristel Technologies Ltd was established by Tristel plc in July 2006 following the acquisition of Vernagene Ltd. It markets the complete range of former Vernagene water treatment and hygiene products which are based on stabilised chlorine dioxide technology. The range includes established brands such as Purogene, Harvest Wash and Sanogene.

Peter Rolinson, Sales Manager for Tristel Technologies said: "We serve a wide variety of industrial and healthcare sectors with products to meet a whole range of different challenges, from disinfection in food processing facilities right through to the treatment of potable water supplies. The move to new premises will not only improve the working environment for the Tristel Technologies' team, but will also allow for future development as we continue to expand into new areas and extend the product range."

Full details of the company and its products are available at www.chlorinedioxide.co.uk

About Tristel Technologies

Tristel Technologies, formerly Vernagene Limited, is part of Tristel plc, a company that uses proprietary chlorine dioxide chemistry to create instrument and surface disinfectants.

Tristel Technologies serves a broad base of customers in government, municipal, industrial, healthcare and food sectors with its established range of stabilised chlorine dioxide products and services. The company's sales and sales support teams have extensive experience in the water and environmental hygiene sectors, and strategic alliances with other specialist chlorine dioxide companies and individuals around the world. Its services include complete before and after sales service, training in the use of its products and equipment, site surveys, equipment and chemicals for on-site trials, installation and commissioning, preventative maintenance contracts, equipment management programmes and engineer support services.

Tristel plc has its headquarters in Newmarket, UK and a network of distributors around the world. The company was admitted to trading on AIM on 1 June 2005. Its stock exchange symbol is TSTL.
