Details: Tristel new premises/in-house manufacturing

NEWS RELEASE

Continued growth prompts Tristel's move to larger premises and in-house manufacturing

29/10/2007. Newmarket, UK: Continued sales growth and the introduction of an expanded product range have prompted a move to new and larger premises for infection control company Tristel Solutions. The company, based near Newmarket, UK, has relocated just across the road from its former offices, moving into a large and tailored facility. This has enabled them to bring in house all manufacturing, production and warehousing for both Tristel Solutions and sister company Tristel Technologies, whose sales offices are in Bolton, UK.

CEO Paul Swinney says that there is increasing demand for Tristel's infection control range around the world:

"In the healthcare sector we have seen a significant expansion of our range this year with the introduction of products for specialist areas of decontamination. Our growing distributor network around the world means that we are also quickly extending our reach into new markets. And with Tristel Technologies we additionally have a broad base of customers in government, municipal, industrial, healthcare and food sectors. With this expanded organisation and the need for larger premises, it made perfect sense to bring our manufacturing under the same roof, from the point of view of cost and managing the logistics."

The new facility houses all Tristel Solutions' commercial functions as well as production, packing, warehousing and customer service. Tristel operates a Quality Management System compliant with both BS EN ISO 13485:2003 and BS EN ISO 9001:2000. These are independently verified by BSI through regular audit and assessment visits.

About Tristel

Tristel uses proprietary chlorine dioxide chemistry to create instrument and surface disinfectants. With its origins as a healthcare business specialising in infection control products, Tristel has recently extended its operations to include legionella control in water supplies and contamination control in the food and pharmaceutical industries.

The company is creating applications for its chemistry that address the four routes of transmission of infection and contamination – surfaces, instruments, water and people.

Tristel plc has its headquarters in Newmarket, UK and a network of distributors around the world. The company was admitted to trading on AIM on 1 June 2005. Its stock exchange symbol is TSTL.
