

NEWS RELEASE

Tristel introduces revolutionary new endoscope decontamination system

8 April 2008: Newmarket, UK: In expectation of high demand, Tristel is inviting potential customers to register their interest in the new Tristel STELLA, due to be launched in June 2008. This new, unique and low cost endoscope decontamination system is suitable for non- and single-lumened instruments used in bronchoscopy, cardiology, urology, gynaecology, reproductive medicine and ENT.

STELLA not only has the key capabilities of modern Automated Endoscope Reprocessors - such as single-use of disinfectant and an audit trail for every stage of the decontamination procedure - but also acts as a storage and transportation system for the endoscope.

Furthermore, STELLA is battery operated, portable, requires no water supply and will enable scope decontamination to take place in clinics, surgeries, physicians' offices and hospital departments where Automated Endoscope Reprocessors are not available.

At a cost of less than a tenth of most automated systems the key regulatory requirements of endoscope decontamination can be met by the STELLA system.

To find out more and register your interest in STELLA , contact Tristel Solutions on +44 (0)1638 721500 or email mail@tristel.com

About Tristel

Tristel uses proprietary chlorine dioxide chemistry to create instrument and surface disinfectants. With its origins as a healthcare business specialising in infection control products, Tristel has recently extended its operations to include legionella control in water supplies and contamination control in the food and pharmaceutical industries.

The company is creating applications for its chemistry that address the four routes of transmission of infection and contamination – surfaces, instruments, water and people.

Tristel plc has its headquarters in Newmarket, UK and a network of distributors around the world. The company was admitted to trading on AIM on 1 June 2005. Its stock exchange symbol is TSTL.
