

NEWS RELEASE : 13 Sep 05

**Medica debut for Tristel –
European launch of three new infection control products**

Stand Number: 13/B78-4

Infection control company, Tristel Solutions Limited, will exhibit at Medica (Düsseldorf, Nov. 16-19, 2005) for the first time this year and will use this forum to launch into Europe a number of its products, all of which use the company's patented chlorine dioxide chemistry.

First of these is the Tristel Sporicidal Wipes system, which comprises individually packaged Sporicidal Wipes, Pre-Clean Wipes and Rinse Wipes. Used primarily to decontaminate nasendoscopes and ultrasound probes, when combined with the Tristel quality audit trail it provides a complete decontamination system with full traceability.

The Tristel Duo system, launched in the UK this year, is the first rapid action sporicidal cleaner for non-invasive medical devices. Effective, convenient and easy to use, Tristel Duo provides a readily available means of rapid decontamination and is active against organisms including MRSA, *Clostridium difficile*, *Bacillus subtilis*, *Mycobacterium tuberculosis*, *Acinetobacter baumannii* and *Norovirus*. It has applications in diverse areas, including for work surfaces, dressing trolleys, beds and mattress covers, instrument tables, monitor cases, control panels and keyboards.

Thirdly, the new Tristel Generator is a fully automated chlorine dioxide production system that enables Tristel's chemistry to be used in applications requiring a continuous stream of chlorine dioxide. The Tristel Generator doses water supplies with its patented chlorine dioxide chemistry at pre-set concentrations. Chlorine dioxide production is instantaneous and continuous. An on-board probe monitors and records the concentration and the system provides a record of all variables involved in producing the chlorine dioxide.

The Tristel Generator is compact and may be wall mounted or floor standing. As well as producing chlorine dioxide at the low concentrations required for water disinfection, the Generator is equally capable of producing the high concentrations needed to disinfect medical equipment. A number of collaborative developments with manufacturers of endoscope washer-disinfectors are in progress.

About Tristel Solutions Limited

The cornerstone of the Tristel product range is a patented chlorine dioxide chemistry used to sterilise medical, dental and veterinary instruments. In 1998, the business that became Tristel acquired all worldwide rights to this chemistry. The principal operating subsidiary of the group was established at this time to exploit the UK market and Tristel has become the leading supplier of liquid chemical sterilising solutions to UK hospitals.

The recently introduced Tristel Wipe is the world's first rapid action sporicidal wipe. It incorporates Tristel's patented chlorine dioxide chemistry and can kill all organisms on a pre-cleaned surface, from which soil and organic matter have been removed, with a contact time of only 30 seconds. The Tristel Generator and Tristel Duo are the latest addition to the company's range of products and services.

Tristel Solutions Limited was admitted to trading on AIM on 1 June 2005. Its stock exchange symbol is TSTL.
