

Protect yourself and patients from SARS-COV-2

The emergence of the novel coronavirus SARS-CoV-2, the cause of the COVID-19 disease, from Wuhan, China, has now spread across the world.

Coronaviruses are airborne viruses spread via respiratory droplets or high-touch surfaces. The droplets can settle on surfaces which can then harbour the virus. **Medical surface disinfection and hand hygiene are key measures in the prevention of coronavirus infection.**

MEDICAL SURFACE DISINFECTION

Ensuring all medical surfaces are effectively disinfected is key to preventing healthcare-associated infections (HAIs). Coronaviruses have been shown to survive on inanimate surfaces for up to nine days.

JET and Tristel Fuse for Surfaces are chlorine dioxide sporicidal disinfectants proven effective against the most resistant viruses in the medical field. Both products are virucidal and effective against coronaviruses in contact times as short as one minute.

FOR HIGH-TOUCH SURFACES

JET

JET is a powerful sporicidal disinfectant that can be used on medical device surfaces located near to the patient, such as IV poles, bed rails, mattresses, and over-bed tables.

It has a uniform one minute contact time with proven efficacy against viruses.

FOR WALLS & FLOORS

Tristel Fuse[™] for Surfaces

Tristel Fuse for Surfaces is designed specifically for the cleaning and high-level disinfection of large surface areas such as walls and floors in critical hospital areas.

It harnesses the power of Tristel's proprietary chlorine dioxide chemistry with proven efficacy against viruses in just five minutes.

HAND HYGIENE

According to the World Health Organization (WHO)*, hands are the main pathways of germ transmission. Hand hygiene is therefore one of the most important measures to prevent the transmission of pathogens and prevent healthcare-associated infections.

WHEN DO YOU NEED TO WASH YOUR HANDS?

Hands normally carry lots of germs and should be washed with soap and water:

- after coughing or sneezing into your hands
- after visiting the toilet
- before handling food
- when visibly dirty

WASH HANDS WITH SOAP AND WATER!
